

GLOBAL AI HACKATHON 2026

GuideLight

Connecting Blind People to Community Help Instantly

 **Dareen Galal Eldeen**  **Yomna Mazhar Imam**

Direction A: Crisis-to-Action Translator

The Problem

Why finding community support is a double crisis for blind individuals.

The "Information Brick Wall"

Confusing Jargon

When families face crisis, community aid forms (like food programs or housing rules) are long and full of confusing legal words. Regular screen readers take hours to get through them.

Completely Scattered

Important info is hidden across different government and NGO websites. Without a clear path, it's easy to get lost or give up on getting help.

Sticks Guide Feet, Not Documents

- A white cane or a guide dog helps a blind person navigate physical streets safely.
- But these tools cannot help them read a text-heavy application form or find out which building to go to.
- This creates a heavy dependency on others, slowing down support when they need it most.

Our Idea

Moving from "What do I do?" to a direct bridge to help.

What is GuideLight?

GuideLight is a voice-first AI assistant made specifically for the blind community.

Unlike basic tools like ChatGPT that just summarize text, GuideLight extracts **immediate next steps** and **automatically connects** the user to local help organizations.

| How It Works (Step-by-Step)

1. Simple Input

The user uploads a photo of a document or voices their current crisis request.

2. 3-Level Breakdown

AI scans the file and extracts: What you need, Where to go, and When the deadline is.

3. Real Action

The app reads a simple checklist and directly links the user to the nearest support group.

| Figma Prototype: Built for Blind Users

Real Accessibility Design

- **Giant Audio Button:** The microphone takes up 80% of the screen so it is easy to tap without looking.
- **Ultra-High Contrast:** Uses large text layouts designed for low-vision visibility.
- **3-Tier Clear Audio Feedback:**
 1. 📝 Things to bring
 2. 📍 Where to go (with map route)
 3. ⌚ Due date

Simulated High-Contrast Screen Interface

Direct Bridges to Local Organizations

GuideLight doesn't just talk. It acts as a bridge to real relief organizations based on what the document says:

Feeding America

If the form mentions food stamps or grocery pantry help.

United Way

For rent assist, emergency shelter, or local bill support programs.

Crisis Text Line

Direct integration for immediate mental health support during distress.

Responsible AI & Safety

How we ensure our AI stays accurate, fair, and safe.

| Safe, Transparent System Design

-  **Anti-Hallucination Links:** The app includes direct links to official government pages so the user can verify the information instantly.
-  **Human Backup:** For highly complex or dangerous situations, the AI shows a clear "Connect to a Human Caseworker" shortcut.
-  **Strict Privacy:** Documents are processed instantly to extract steps and then immediately wiped from our engines. No identity data is saved.
